TEAM 4

CHALLENGE: CONNECT BETTER

Trade Fair AI Matchmaker | Profile Compatibility Engine + Guest Recommendation Web App

THE PROBLEM:

Navigating a trade fair with hundreds of stalls is overwhelming for guests, while exhibitors struggle to attract the right audience. Manually evaluating guest profiles against exhibitor capabilities is tedious and inefficient. Build an intelligent matching engine that computes compatibility scores between guests and exhibitors, delivering a tailored list of the top 30 exhibitor recommendations for each guest via an intuitive web application.

SOLUTION EXPECTATIONS:

1. **Profile Ingestion:** Ingest structured and unstructured profile data for both guests (industry, job role, procurement interests, company size) and exhibitors (products, industry verticals, target buyer criteria, booth location).
2. **Compatibility Scoring Engine:** Implement an algorithmic/AI scoring model that evaluates semantic alignment, relevance, and intent between guest interests and exhibitor offerings, assigning a normalized compatibility score.
3. **Top 30 Recommendation Output:** Rank and present the top 30 most relevant exhibitors for any given guest profile, highlighting booth details and matching rationale.
4. **Guest Web Application:** Build a responsive web app interface where a guest can log in or select their profile, view their top 30 recommendations, inspect compatibility scores, and bookmark stalls to visit.
5. **Interactive Filtering:** Allow guests to dynamically sort or filter their recommended list by score, industry segment, hall/booth location, or product categories.

LIVE DEMO:

Select or upload a guest profile → Run the compatibility matching engine → Display the top 30 ranked exhibitors with match percentages → Filter and inspect matching rationale for a top stall → Save or export the personalized visit list.

GOALS:

1. Provide explainable match insights (e.g., *"Matched on: Industrial Automation, Component Sourcing"*).
2. Optimize search/scoring latency to deliver top 30 recommendations in under 2 seconds.

FAIRNESS & RELEVANCE GUARDRAILS:

Ensure scoring criteria remain objective, relevant, and free from arbitrary bias. Do not hardcode preferences or artificially suppress exhibitors; match scores must reflect legitimate profile synergy.

STRETCH GOAL: ENGAGE BETTER

Exhibitor Demand Forecast & Mobile Integration | Stall Traffic Analytics + MMI App PoC

THE PROBLEM:

Exhibitors lack proactive visibility into potential footfall and high-value leads attending the event, leaving booth staffing and engagement to guesswork. Build an exhibitor-side intelligence portal with configurable guest discovery, and integrate the guest experience natively into the MMI visitor mobile app.

SOLUTION EXPECTATIONS:

1. **Exhibitor Portal Web App:** Build a dedicated web application for exhibitors displaying prospective guest demand, guest demographics, and estimated stall traffic.
2. **Configurable Lead Discovery:** Allow exhibitors to configure and view a custom number of top potential guest matches (e.g., view top 20, 50, or 100 high-affinity guests likely to visit their booth).
3. **Anonymized Lead Insights:** Display actionable aggregations (e.g., guest seniority, purchasing intent, geographic distribution) while respecting guest privacy.
4. **MMI Mobile App Integration:** Embed the recommendation engine into the MMI visitor mobile app as a functioning Proof of Concept (PoC).
5. **Real-Time Synchronisation:** Synchronize bookmarking, stall visits, and profile updates seamlessly between the MMI mobile app and the backend matching engine.

LIVE DEMO: Connecting Stalls to guests in Real Time!

Open the Exhibitor Portal → Set a configurable guest target threshold → View high-affinity guest leads and traffic metrics → Open the MMI visitor mobile app → Showcase native in-app recommendations and real-time synchronization.

GOALS:

1. Deliver clean API/SDK endpoints for plug-and-play integration into the MMI visitor mobile app.
2. Provide real-time recalculation of exhibitor lead pipelines when guest preferences update.

DATA PRIVACY GUARDRAIL:

Enforce strict privacy protection on the exhibitor dashboard. Present guest data through aggregated metrics or opt-in business contact details; never expose personal contact information without explicit guest consent.
